

COMTRAXX[®] CP924-E

Hospital solutions from Bender

Essential - Overview and safety for operating theatres

The variety of technical devices and controls in operating theatres makes it difficult to keep track of everything. That is why solutions are needed that help medical staff focus on what is most important, the patients. This applies especially in critical situations. The CP924-E has been developed to make the work of medical staff in operating theatres easier. It is a control and information centre for operating theatres. The CP924-E makes it easy to control and monitor most devices and controls in the operating theatre. All essential information is clearly displayed on a large screen and any faults that occur are immediately indicated. In addition, the device features many useful extra functions.

The most important information and functions for operating theatres:

- Clock
- Timer
- Countdown
- Insulation monitoring
- Room temperature controls
- Humidity controls
- Ambient light dimmer
- Light group 1 and 2 on/off
- Surgical light on/off
- UPS monitoring
- Monitoring of medical gases
- Fan/HAVAC on/off
- Fan/Ventilation reduction
- Cleaning mode
- Alarm bar

We have combined all important functions and features in one device while keeping the installation simple (plug & play). The operation is based on a clear 1-click concept.

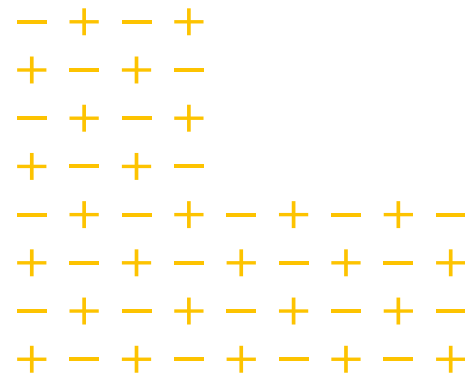

CP924-E in a nutshell

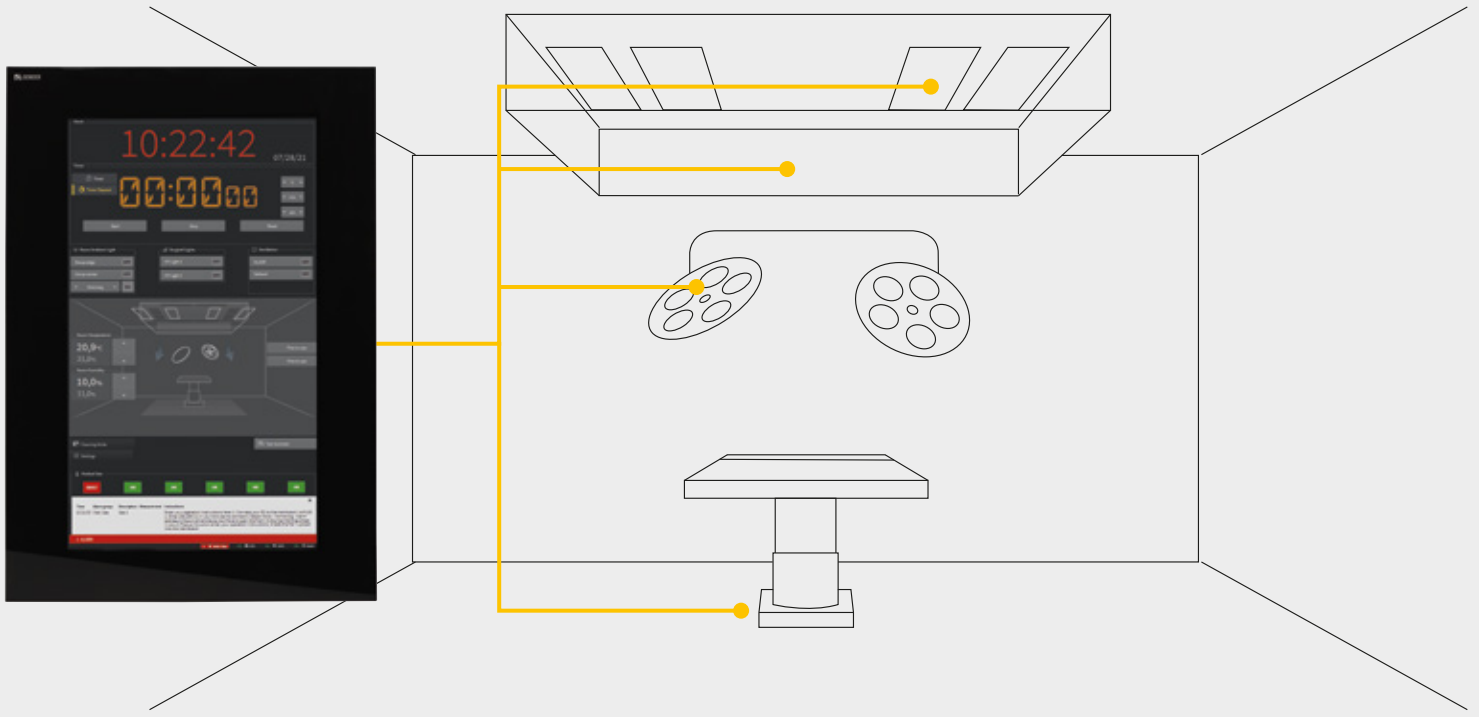

The CP924-E:

- Central monitoring and control unit in operating theatres for medical staff
- All important information available at a central location and at the right time
- Control of lights, timer, HVAC, surgical lights etc.
- Monitoring of power supply and medical gases
- Visual and acoustic alarms

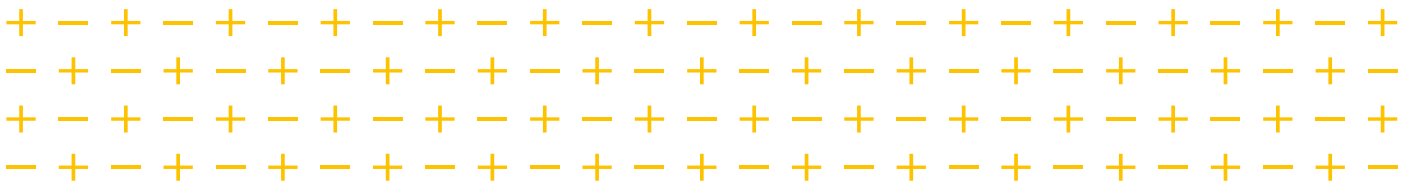

Highlights

- **Timer/Timer Elapsed**
Operating times can always be kept in view by means of the countdown and timer function. The portrait mode layout and the integration of timers and clock at the top of the display make this information clearly visible anywhere in the operating theatre.
- **Alarm pop-up and text**
Individually customisable alarm texts make it possible to display instructions for action in the event of a malfunction. The medical staff is informed about where a fault has occurred and how it can be eliminated. This prevents uncertainties during troubleshooting.
- **Cleaning Mode**
Prevents unintentional operation of buttons and switches while cleaning the glass surface.

All important functions in a compact device.

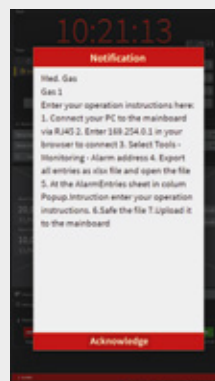

Easy installation (plug & play)

Clearly visible timer

Striking alarm pop-up

- Complete control technology in a wallbox
- Easy installation (plug & play)
- Low installation depth of max. 91 mm +/- 3 mm
- Easy operation
- Hygienic glass surface
- Easy to clean
